

“Healthy, robust hearing is about music. It’s about laughter. It’s about stories. It’s about conversation. It’s about friends, family and relationships. It’s about your ability to think, remember and understand. It is, in short about the very things that make life worth living. And that, more than anything is why treating hearing loss early and effectively really matters.”

Listen Up! A Physician’s Guide to Effectively Treating Your Hearing Loss

Dear Friend,

Thank you for taking the time to learn more about hearing loss. You are one step closer to effectively treating your hearing loss and improving your quality of life!

As a hearing loss physician with more than thirty years experience treating thousands of patients, I know firsthand that better hearing means a better life. I also know how time consuming, frustrating, and overwhelming it can be to find the right way to treat your hearing loss. Many patients lose hope after seeking treatment only to find their hearing is no better off and in some instances, worse.

In this book, I show you the right way to go about effectively treating your hearing loss so you can end the struggle. Too often, patients get a “quick fix” that over-promises and under-delivers. More than one in four patients with hearing aids, for example, don’t use them. Here, I show you why that is and how we can do better.

You will discover exactly which questions to ask your providers so you can make an informed decision about choosing the right treatment option for you. My goal is for you to solve your hearing loss once and for all so you can remain independent, enjoy socializing, and connect better with family and friends – that is the fulfilling life you deserve.

So *Listen Up!* and let’s get started on your road to better hearing and a better life!
